portfolio
Kefi Adem

Education

•National Institute of Applied Science and Technology (Insat) *2023 - Current*

Networks and Telecommunication

•Mahmoud Messadi High School in Nabeul *2019 - 2023*

Computer Science

Projects

•Multiple CTFs Author

Authored comprehensive CTF challenges spanning introductory to advanced difficulty levels.

- Reverse Engineering: Securinets Quals / Summerrush / Darkest Hour / CyberCamp / CyberSphere
- Mobile Security: Securinets Friendly
- Game Hacking: IFTxSecurinets : Unity, Gameboy and Nintendo

•AI-Powered WAF | TrustScore Module

Behavioral trust scoring engine for an AI-driven Web Application Firewall, team project

- Wrote the **trust engine (UEBA)** of a team-built AI WAF in Go: scores every client IP and logged-in user 0–10 across 8 weighted modules (recon, brute force, DDoS, scraping, session anomalies, evasion, vulnerability probing, account abuse), with boosters for normal behavior, overrides for clear attacks, and IP2Location-based country/ASN/proxy-VPN-Tor lookups, mapping to five decisions: allow, allow with stricter checks, challenge, block or ban.
- Smoothed user scores with EWMA, exported IP/user ID-to-score pairs to Redis for the proxy to look up, mapped each decision band to LightGBM, Coraza and challenge handling, and wrote the identity middleware plus 30+ unit tests.

•Clipboard Hijacker | Static Malware Analysis & Reverse Engineering

Obfuscated PowerShell clipboard hijacker

- Performed in-depth static analysis and reverse engineering of an obfuscated PowerShell clipboard hijacker, including manual deobfuscation and static unpacking.

Experience

•Sopra HR Software *July 2026 - August 2026*

Software Engineering Intern

- Built an automated security-audit platform end to end: **FastAPI**, **Celery**, **PostgreSQL** and **Redis** driving **OWASP ZAP** scans across 5 Dockerized services.
- Built the CWE-to-OWASP-Top-10:2025 classification layer, mapping 60+ CWEs straight from OWASP's own lists, plus a dedup/filtering pass that cut 1,210 raw ZAP alerts down to 650 distinct findings.
- Self-audited the stack with **pip-audit**, caught and fixed 9 CVEs from an over-pinned dependency, and shipped the project backed by 71 automated tests.

•FLITZ Cybersecurity Team *September 2024 - Current*

Reverse Engineering and Mobile player and author

- Qualified for CSAW (Ranked 10th) & ASCWG (Top 5%) & OLYMPIC (Top 10%) CTFS

•Securinets INSAT *September 2025 - Current*

Technical Team Member and Reverse Engineering/Mobile Instructor

- Actively conducting workshops (15+ sessions to date): Reverse Engineering
- Mobile Security : APK reversing and pentesting

Technical Skills and Interests

Programming Languages: C/C++, Golang, Python, Assembly (x86/x64), JavaScript, Java
Operating Systems: Linux (Arch, Debian), Windows
Reverse Engineering/Debugging: IDA Pro, Ghidra, x64dbg, GDB
Security & Forensics Tools: Wireshark, PEID, Detect It Easy, UPX
Development & Analysis Utilities: Radare2, Frida, ADB, Docker
Networking & Protocols: TCP/IP, VLANS, STP, OSPF, NAT, DNS, DHCP, Switching & Routing (Cisco IOS), Packet Tracer, GNS3
Fields of Interest: Reverse Engineering, Malware Analysis, Binary Exploitation, Cryptography, Systems Security, Forensics, Web Security, Pentesting, Mobile Security
Soft Skills: Clear communication, Effective teamwork, Critical thinking, Problem solving, Self-directed Learning
Languages: Arabic Native , English Professional , French Intermediate

Certifications

•CCNA: Introduction to Networks

•CCNA: Switching, Routing, and Wireless Essentials
